Memory: How Good is Yours?

1. Look carefully at each photo. Then turn the paper over. On a separate sheet, list as many objects as you can remember.

2. Look at the objects again. Turn the paper over. This time try to remember where the objects are located. On a separate sheet, list the objects by row.

3. Try the activity with a partner. Study the page together by pointing and saying the name of the object aloud (softly). Then each of you try to list all of the objects you can remember. Did you remember more when you used more of your senses? Which were remembered most, technology photos or food photos? Why do you think this was true?
